ABSTRACTED-PUB-NO: US 6366856B
BASIC-ABSTRACT:

NOVELTY - A controller connected to a map memory, a GPS receiver and a compass, recalls a map, calculates a heading fix based on output of the receiver and reads a compass heading. The controller calculates the map offset value showing difference between heading fix and the orientation of the map. If the heading fix is unavailable, then offset value showing difference between compass heading and the orientation of the map, is calculated.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is included for map display orienting method.

USE - Mobile device e.g. cellular or PCS telephone for use in rental cars.

ADVANTAGE - Enables effectively updating map orientation.

DESCRIPTION OF DRAWING(S) - The figure explains the operation of mobile device.

CHOSEN-DRAWING: Dwg.5/5

TITLE-TERMS: MOBILE DEVICE RENT CAR CONTROL CALCULATE MAP OFFSET VALUE DIFFER HEADING FIX OUTPUT GROUP RECEIVE ORIENT MAP

BASIC-ABSTRACT:

NOVELTY - A personal navigating system(PNS) and a method therefor are provided to easily confirm a moving path to a target point by continuously providing path information to the target point through a mobile communication terminal having a GPS (Global Positioning System) function.

DETAILED DESCRIPTION - A personal mobile communication terminal(100) has a GPS function. A mobile network company system(200) connects the personal mobile communication terminal(100) to the Internet for supporting a wireless data communication. A mobile compass server(300) responds to a navigating request from the personal mobile communication terminal(100) connected through the Internet, and provides information regarding a current position of the personal mobile communication terminal(100) and optimum path information as to a desired

destination to the personal mobile communication terminal(100) using data regarding map and geographical information.

CHOSEN-DRAWING: Dwg.1/10

L7: Entry 1 of 5

File: USPT

May 8, 2001

DOCUMENT-IDENTIFIER: US 6230081 B1

TITLE: Information system for golf carts and system for calculation of use and/or acquisition of use data

Detailed Description Text (18):

When the equipment provider has many branch offices or markets the equipment item at many different locations, the base stations at these locations are preferably interconnected via the telephone system 28 to a central server 30 which updates in the base station usage data, such as e.g. price of usage, thus ensuring uniform accounting.

ABSTRACT:

The invention concerns an information system for displaying in a vehicle used to transport at least one person playing golf. This system comprises a base station which is located in the area of a club or a course and which has a control and a memory for the acquisition of travel data and other information; a control unit arranged in the vehicle which has at least a first control logic for processing and displaying the travel data and a second control logic for processing and displaying further information on a graphic display arranged in the vehicle; an interface provided at both the base station and the vehicle for the transmission of at least travel data and further information between the base station and the control unit, where the control unit compares the travel data transmitted and/or generated by the operation of the vehicle with predetermined reference values and, depending on the result of the comparison, stores/changes and/or displays actual travel data on the display and/or directly affects the operation of the vehicle, and the second control logic displays the additional information on the graphic display depending on the travel data and/or the operating state of the vehicle. The invention also concerns a chip-card based accounting system for driven machines and vehicles, especially golf carts.
